

MultiChax FAQ

How will MultiCHAX® benefit my company?

MultiCHAX® is a software product that works as an on demand MICR encoded check printing solution, that prints MICR encoded checks on blank forms in a single step. While doing this it can print signatures, logos, and form overlays from scanned images, not to mention generating “Positive Pay” files.

MultiCHAX® integrates with virtually all accounting programs such as QuickBooks, Quicken, Great Plains, Solomon, Peachtree, and many more. MultiCHAX® eliminates the need to switch check forms when you switch bank accounts within your accounting software.

As with, our CHAX® software, security was of great importance. Password access provides users handling a variety of accounting tasks within a network, abundant security and comfort. MultiCHAX® provides ample levels of security to separate functions and/or bank account for each individual user.

How Does MultiChax work?

Once MultiCHAX® is installed and configured, all you need to do is load the checks to your laser printer, create a check to be printed and select MultiCHAX® as the printer in your accounting software, and MultiCHAX® will do the rest.
